

Assured IT infrastructure related compliances for SOX, Basel II, GLBA, HIPAA, PCI Data Security Standards, ISO 2700I Standards and more...

Amid stringent requirements for compliance, large and complex IT deployments imply increased costs of remaining compliant.

Different compliance requirements from different agencies are to be fulfilled simultaneously. Challenges increase owing to varied devices providing diverse data for compliance.

Data aggregation from multiple sources has to follow different business rules based on reporting, minimum storage period and other requirements.

Everest's Compliance Solution

All solutions in the Everest Solution Set have been designed to help customers stay compliant with stringent norms of the Sarbanes Oxley Act, Basel II banking supervision standards, Gramm-Leach-Bliley Act, HIPAA regulations for the insurance sector, PCI data security standards for the payment card industry and the ISO 27001 information security management standards.

Amendments and Impact Analysis

The solution has been designed in a manner such that all amendments to these regulations and standards can be easily updated as and when new clauses are added or new standards put in place.

Business domain team and architects of the Everest Solution Set work hard to ensure that all updates and additions to compliance standards are incorporated into all solutions, thoroughly tested and released to customers well before the actual enforcement dates.

Everest's teams perform detailed impact analysis of every regulation and changes to it to ascertain the implications on existing IT infrastructure setups of customers.

Features and Benefits

Everest provides network and operating system access control, enforcement of routing controls inline with the access control and security policy.

Assessment of network services and mapping them with updated compliance requirements and prevalent best practices is possible on an ongoing basis.

The solution takes care of segregation of roles and responsibilities, and privilege management. Audit trail access monitoring and use of file-integrity monitoring and change-detection modules enhance the efficacy of log management.

Everest handles incident and problem management. Its rule engine aids in investigation and gathering evidence after incidents

Information security and service deliveries inline with third party SLAs are maintained across all elements of the Everest Solution Set.

Checking of technical compliances such as hot-fixes, anti-virus updates, application patches along with network configuration management, configuration base-lining and configuration comparison further aid pan-organizational compliance processes.
