

EVEREST

Log Management Solution

With complex IT infrastructure spanning the globe, you need the assurance of Everest's centralized and integrated rule-based log management system

Businesses run on a complex assemblage of IT infrastructure. Information on networks is the life-blood of organizations.

Terabytes of business data should ideally be giving more top-line benefits with companies being able to perform detailed analysis of customer preferences to serve them better.

Information on all customer activities is carried on heterogeneous technologies over different environments and is present in various storage devices in data centers globally. Companies want intelligent insights from logging and analyzing this information.

In addition, organizations want their internal and external users protected against security threats. Companies want to be fully compliant amid rising cyber crime.

Everest's Log Management Solution

Everest's Log Management Solution is a centralized, web-based solution that integrates at all levels of the IT infrastructure of organizations.

Key Features of the Solution

The Everest Solution has a rule-based correlation engine providing root cause analysis of incidents anywhere on the IT infrastructure network.

The solution monitors and investigates across all network devices, security devices, servers and applications.

It analyzes security trends centrally and performs threat investigation through security data. It locates security breaches and provides a forensic analysis of problems.

Access monitoring is handled at physical and logical levels. The solution is compliant with multiple regulations such as Basel II, SOX, PCI-DSS, HIPAA, GLBA and more.

Benefits

Everest's log management solution helps companies boost their top-lines, shore up bottom-lines and improve operational efficiencies.

With Everest, customers can make new and focused business forays by identifying demand among user segments through usage pattern analysis.

The solution serves as an aid in planning and implementation of organization-wide security policies by providing unified views of physical access and logical data

Everest supports strategic, tactical and operational decision-making through detailed analysis and real-time dashboards

Users of the solution can provide focused customer service by identifying bottlenecks through rule-based root cause investigations.

Compliance with international regulations is ensured. Amendments and additions in these regulations are promptly added to the solution as updates.
